This document demonstrate how to install Java Runtime Environment (JRE) on Windows to be used with ASYCUDA World system.

1.   Downloads

To have maximum compatibility with ASYCUDA system, it is recommended to install JRE version 1.6_17. You can download the file from following link. Alternatively, the file is available to download in customs website.

http://www.oracle.com/technetwork/java/javasebusiness/downloads/java-archive-downloads-javase6-419409.html#jre-6u17-oth-JPR

Accept licence agreement, choose the relevant file to download based on the specification of your PC:

1. For Windows OS (32-bit) download: jre-6u17-windows-i586.exe

2. For Windows OS (64-bit) download: jre-6u17-windows-x64.exe

3. For Linux OS (32-bit) download: jre-6u17-linux-i586.bin

4. For Linux OS (64-bit) download: jre-6u17-linux-x64.bin

2. Installation

Run the installer file, downloaded in step above. If you see security warning, image below, click on run.

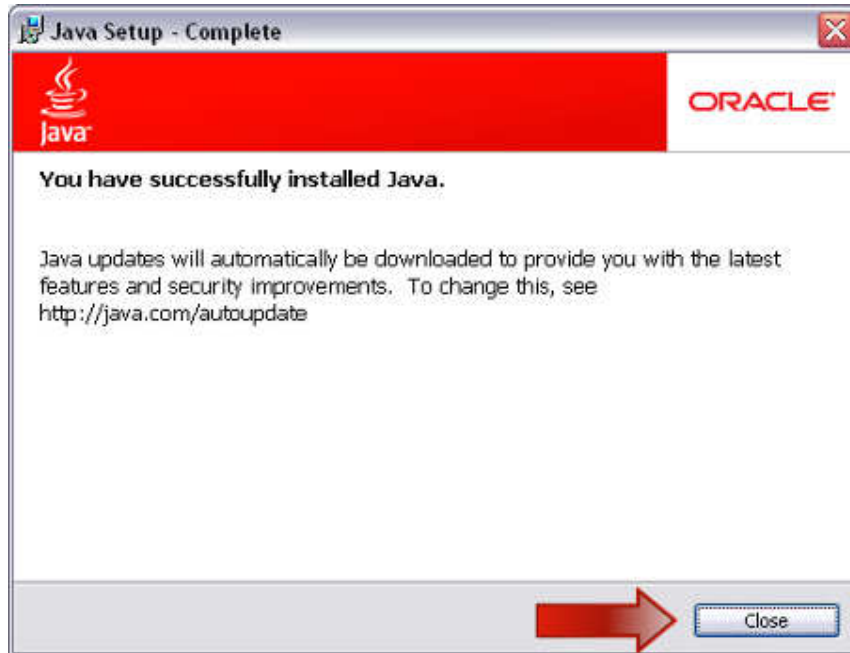

Once installation started, click on the **Install** button to accept the license agreement, which will then proceed with the installation.

During installation, you'll see a series of different applications that take advantage of the Java Runtime Environment (JRE)

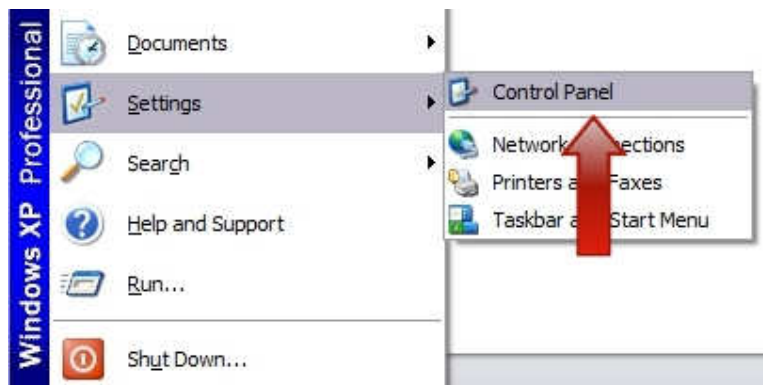

The installation may take a few minutes to completely load on your system. Once the installation has been completed, you will be prompted with the below message. Please click on **Close** button to exit the installer.

Disabling Java Automatic update

By default, Java updates itself automatically when a newer version is available. In order to prevent automatic update, you will need to configure the Java Plug-in. Go to your Windows **Start** button, then to **Settings** and then select **Control Panel.**
